

Project/Initiative sheet of the Terra Congo interface (translated from the original REDD+ registry entry in French)

Activity type	REDD+ project
Name	Jadora REDD+ project in the SAFBOIS forest concessions of the Isangi territory
Project leader	Jadora International LLC and Société Africaine de Bois, SPRL
Main contact person	Donald Tuttle, Président: don@jadorallc.com , www.jadorallc.com
Institutional partners	Ministry of Environment, Conservation of Nature and Tourism
Technical partners	-
Financial partners	-
National status	Project considered acceptable (not yet ratified)
Project start date and Project end date	2010/2031
Administrative location	Territory of Isangi, Orientale Province
Budget (CAPEX)	US\$ 2,700,000
Financing status (CAPEX)	Funded
Carbon finance and other ongoing income (OPEX)	Financing wanted
Link with the national strategy (principal themes tackled within the 30 themes from the Strategy Construction)	<p>The project concerns several themes from the national strategy:</p> <ol style="list-style-type: none"> 1. Community forestry and formal artisanal logging 2. Permanent production forest 3. Afforestation/Reforestation & carbon stock enhancement 4. Environmental services promotion and NTFPs 5. Increased productivity of subsistence agriculture and sedentary farmers 6. Increased productivity of small agriculture and small commercial livestock farming 7. Agroforestry 8. Optimization of biomass energy activities 9. Forest micro-zoning 10. Land tenure securization and harmonization 11. Land use management 12. Law application and enforcement
Description	<p>This project targets sustainable forest management and avoided deforestation on 334,000 ha of land located in two logging forest concessions next to the Congo and Lomami rivers. Concessions include ca. 214,000ha of primary forest and 130,000ha of degraded forest, agricultural land and human settlements, with a population estimated at ca. 500,000, leaving on slash and burn agriculture and on forest proteins. This partnership will enable the creation of programs to avoid unplanned mosaic deforestation and forest degradation (AUMDD) close to roads and existing infrastructure; to avoid unplanned frontier deforestation and forest degradation (AUFDD) along roads built by the partner SAFBOIS and promote biodiversity conservation and social capacity enforcement programs.</p> <p>This project will also restore degraded lands in the northern part of the concession to reduce leakage due to wood production and subsistence farming, activities required to meet local population needs. This will also generate afforestation carbon credits.</p> <p>Furthermore, this project will allow to build an evolutive model, based on verifiable data collected in the permanent forest plots, carbon monitoring and socio-economics indicators. It could be considered to include, or at least to take this information into account in a unified</p>

	national strategy.
